PSU Backflow Preventers Penn State University

University Park and Commonwealth Campuses, PA

Study Cost: \$176,000

Completion Date: 2002

Contact: Jeffrey Spackman, Project Manager, 863-2496

Ling Partnership was commissioned to conduct a study of the backflow prevention systems of the domestic water main service entrances and fire protection water main service entrances.

The study was proposed in order to establish a database of the existing water service conditions. This information was used as a starting point to define the subsequent probable cost and scope of the design and construction phase of the overall project.
