NASA – Robotics Engineering Consortium

Lawrenceville, PA

Building Gross Square Foot Area: 81,000 s.f.
Completion Date: 1996

The NASA Robotics Engineering Consortium of Carnegie Mellon University located this facility in an abandoned industrial complex along the Allegheny River. The Consortium develops and tests robotic equipment in the large structure and open space along the river.

The Architectural Engineering firm of Burt Hill Kosar Rittelmann engaged Ling Partnership (formally Parfitt/Ling) to design the fire suppression system for the large facility. The challenges include architectural coordination and cost control by assessing and reusing some existing infrastructure.
