Frear North Laboratory University Park, PA
Penn State University

Opinion of Probable Cost: \$2,800,000

Completion Date: 2002

Contact: Ron Gurskey, Project Coordinator Ph: 863-8734

Ling Partnership provided a study of the HVAC systems of North Frear Building. The overall goal of the study was to provide information that would be a first step in a process to improve the performance of the existing mechanical systems.

The piping, ductwork, air handling, controls, chilled water and hot water systems were evaluated for performance capabilities to meet anticipated changes to the building. Comprehensive recommendations were developed along with opinions of probable construction costs to implement changes.
